## Specials!

The **bbs "Compact Video Analyser"** was the world's first 'on easel' **Video Analyser**. Used on a colour enlarger, in the darkroom the Compact enables the operator to view the image and set the correct filtration and density prior to printing - "what you see is what you get!"

**Features include** - Automatic film recognition - one-film set-up suits all films. Slope compensation for film and paper. 50 paper channels (called up using last three digits of paper emulsion number - no need to write lists!). As the light source making the print and the analysis are the same, a high order of first run prints is achieved. Lamp on/off and exposure times are controlled from the Compact analyser keypad. Enlarger settings - color filtration and density can even be made with room lights on!

**Operation** - place a negative in the enlarger, move camera into position on the turret (as shown in photo). Adjust the color head filters until a correct colour image is obtained on the monitor. (A Grey field to minimize 'eye fatigue' surrounds the image. A pop up Grey scale is also built in for facilitate critical analysis). Adjust image density

with a control on the probe. Enter print size on the keypad. You can then store the information in memory and continue analysing or make a print. After each exposure a thermal data printer prints a ticket with filtration, order &, neg. number, quantity etc.,

The Compact Video Analyser on it's own sold for \$22,500 + tax. We have a demo model **Compact** on a second hand **Omega D5XL 4x5"** colour enlarger fitted with a **Super-Chromega 200 watt**, Dichroic colour-head. A 3-lens turret has a 50 & 80-mm lens and the video camera. The lot for **\$9,950 + GST!**

### Second Hand Kodak Digital Multiprinter for sale

We have for sale a second hand Kodak Multiprinter upgraded to Multiprinter 11 spec (see below).

**Price asked A\$95,000 +GST**

Contact us to confirm the details.

The Digital Multiprinter II unites many of the essential features of optical printers into a versatile and ultra-fast digital workhorse. Its improved CRT exposure system offers outstanding resolution (up to 550 ppi), for sharp prints at sizes up to 11R. And its ability to handle 90 percent of the individual prints and packages in a typical portrait lab's workflow - anything from volumes of wallets to dazzling enlargements - makes it the ideal choice for workflows that need maximum productivity in a variety of applications.

#### FEATURES

- » Exceptional productivity: more than 400 8x10s/hour
- » Superb image quality: resolution of up to 550 ppi, for sharper prints with increased uptime
- » KODAK Color Management technology, for vivid, accurate color reproduction
- » New CRT exposure system, for even sharper prints
- » Reduced daily first-print "warm-up" period
- » Multiple paper width capacity, from 8.2 cm (3.25") all the way to 30.5 cm (12")
- » Daylight-loading cassettes for maximum convenience
